

Protect patients. Comply with DSCSA and FMD. Optimize your supply chain.

STEPLogic Trace is a powerful serialization and traceability platform purpose-built for pharmaceutical manufacturers, wholesalers, and distributors to meet DSCSA and FMD mandates and protect public health.

Our proven solution has delivered compliance for over a decade, enabling secure end-to-end product tracking without disrupting your warehouse workflows.

Why STEPLogic Trace?

- Proven in the first serialization rollout for a global pharma leader in 2012.
- Achieved 70% cost savings versus full WMS replacement.
- Scalable across facilities and trading partners.
- Enables operational improvements beyond compliance with faster receiving, smarter picking, and better accuracy.

A safer, smarter, and more agile supply chain that meets today's regulations and tomorrow's challenges.

Key features

GS1 certified serialization and traceability

Aggregates serial numbers at multiple packaging levels and records all EPCIS events, from inbound to final shipment.

Flexible integration

Easily connects with any WMS, repository (SAP ATTP, TraceLink, Axway), or automation system (WCS, conveyors, scanners).

Configurable transaction control

Apply serialization only where needed (e.g., inbound/outbound or full track-and-trace) to key reduce complexity and cost.

FDA Part 11 validated

Ensures electronic records and audit trails meet regulatory expectations.

Custom apps with no coding

Create custom workflows, reports, or screens using the STEPLogic development platform.

Edge-friendly architecture

Lightweight and modular—deploy only what you need, where you need it.
